Mr. Jeff Lin
514 N Third Street, Suite 105
Minneapolis, Minnesota 55401

Dear Mr. Lin:

Coming across this posting on The Tunnel was quite the experience. Though it is a little more common in this industry than others, the lighthearted tone and the humorous company names really differentiated it against the others.

While navigating through the Bust Out Solutions site, I found that I was very much in agreement with the business model and attitude. I feel that I will be a good addition to the team with my willingness to face challenges that approach from a wide variety of angles.

Through my coursework in my major within the fast-paced deadlines at Carleton, I've become more scrappy than I was before, often having to down coffee for a late night, or seeking help from professors, even if they are somewhat awkward. Further, I have always been the creative type, and I've often found myself applying unusual solutions when I am stuck in a coding rut. This works especially well when I am in a team environment since I find the inevitable skepticism-then-relief reaction to be encouraging.

While I do enjoy conferring with others, I am also perfectly capable doing things on my own from time to time. It is relaxing to be able to work in my own environment, whether it be my Ubuntu OS that I use exclusively for developing or my keyboard that I love typing on so much. It is at these times when I am sitting alone and explaining code to the proverbial rubber duck when I get to really apply my analytical mind that I've developed through some of my earlier coursework in physics.

I think that with the above personal attributes combined with my previous experience at another tech startup, Lotic Labs, will mean that I will be a nice fit for the team for this summer.

Sincerely,
Ju Yun Kim
