

300 North College Street
Northfield, MN 55057

April 10, 2017

Dear Hiring Manager:

I have long been a computer hardware enthusiast, and I will always remember my Athlon X2 that was in my first gaming computer. Fast forward almost a decade, and I found myself working towards a computer science degree at Carleton College. I was captivated by the extent to which I could use these modern marvels to solve almost any problem.

I come across this position while browsing the open positions on the company website, and though there are a couple functions that I would need to adapt my existing skills to, such as Window scripting or OS configuration, I feel that I will be a good fit. As a custom computer builder, I already have quite a bit of experience in configuring and troubleshooting various hardware. Further, through my experience at my school's computer drop-off center, I have familiarity in diagnosing and fixing unique issues. These combined with my strong coding skills and a tendency towards workflow optimization, I believe that I will be able to get up to speed quickly and deliver stellar results.

If given the opportunity, I will excel at whatever my assignment, whether it be for the exciting Ryzen series, the upcoming RX500 series, or anything else.

Sincerely,
Ju Yun Kim
